                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophorasis. Vector DNA was prepared from a derivative of pWD42 (gil4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to identify it as a clone from the retina tissue cDNA Library Preparation: M.B. Soares Lab Clone distribution: Researchers may obtain BMAP cDNA clones from RESEARCH GENETICS. It should be noted that Bento Soares is generating a small number of additional specialized non-redundant arrays of BMAP cDNAs whose availability will be considered under appropriate and limited collaborative arrangements
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Genome Res. 6 (9), 97044477
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            National Institute of Mental Health 6001 Executive Blvd. Room 7N-7190, 1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 (bases 1 to 481)

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is a cDNA encoding membrane transport protein, CC MTRP-12 from Incyte clone 1733477 isolated from human BRSTTUT08 cDNA CI library. MTRP-12 shows homology to mouse transporter (GI 5359730) and human transporter (GI 291964), and is expressed in nervous, and human transporter (GI 291964), and is expressed in nervous, can human transporter (GI 291964), and is expressed in nervous, can have present sequence is useful in diagnosis, prevention and treatment confidence and the present sequence is useful in diagnosis, prevention and treatment confidence and with increased or decreased expression of MTRP concerns and salfation of disease, diabetes, Parkinson's disease, concerns and the present as cancer thyroiditis, viral, bacterial, fungal, parasitic, protozoal or compinity of MTRP polynucleotides are useful as targets in microarrays. Tragments of MTRP polynucleotides are useful as targets in microarrays. CC MTRP DNA is also useful for generating hybridisation probes useful in mapping genomic sequences and detecting differences in sequences among commal, carrier and affected individuals. It is also used for screening libraries of compounds in drug screening techniques.
                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
